

PRESS
release**Isover insulation to wrap up Ecobuild****SGI/085, Monday, 02 February 2009**

Newly available solutions from the UK's leading insulation innovator Isover will feature on Saint-Gobain's debut stand (2365) at the world's biggest event dedicated to sustainable design, construction and the built environment, Ecobuild (March 3-5, Earls Court).

The group's stand at the fifth annual Ecobuild will feature innovative and sustainable insulation systems from Isover's structural and technical divisions which are suitable for a wide variety of new-build and refurbishment applications including commercial, education, healthcare and residential.

Zones on the stand will focus on energy efficiency, safety and security, comfort and aesthetics, and sustainability, while pods in each will allow visitors to experience and learn more about the relevant systems.

Two representatives of Saint-Gobain Isover will also deliver presentations at the event seminars. On March 4th, key accounts manager David Burton will speak on "Insulation upgrade systems," (12.05-12.30) during the "Refurbishing Britain – Cladding and facades: opportunities for sustainable refurbishment," seminar.

Then on March 5th, head of innovation Gerry Mitchell will speak on "Lessons from Europe," (15.05–15.25) during the "Insulate, don't generate," seminar. Saint-Gobain is also sponsoring the seminar theatres each day of the event.

Solutions featured on the stand include an addition to the range of revolutionary pre-insulated ductwork. Climaver® Neto, a high performance thermal and acoustic system, replaces the traditional sheet metal and insulation approach.

Also being showcased at the exhibition is the U Protect product from the Ultimate range. U Protect offers a top-level solution to the fire protection of ventilation ductwork that combines low weight and easy handling.

Solutions from Isover's structural division include RD35, the acoustic system for masonry party walls that has three Robust Details to its name; Vario, an intelligent climate membrane ; SF₃⁺, a complete steel frame insulation system, and APR 1200, the high-performance acoustic quilt for walls and floors.
