NEW WEBSITE FOR KOOLTHERM DUCT INSULATION

Kingspan Insulation, the world's leading manufacturer of CFC/HCFC-free rigid phenolic and urethane insulation has created a new website for its Kooltherm Duct Insulation product range, as part of the company's on-going commitment to the highest levels of customer service.

The Kooltherm Duct Insulation website offers construction industry professionals an easy to use information source for insulating ductwork. It covers general topics such as the principles of thermal insulation, to more specific information on Kingspan Kooltherm Duct Insulation and Insulated Duct Support Inserts; along with the latest information on Building Regulations, including the TIMSA HVAC Guide.

The website, which is accessible via the main Kingspan Insulation site or at www.insulation.kingspan.com/duct/, builds upon the advances made during the re-design of the main site, which was re-vamped in November 2006. With a clean, easily-readable style, the new site's navigation system has a simple index, (found to the left of the screen), which remains visible on every page, so that navigation around the site is absolutely effortless.

The site has the latest literature and news, including the new Kooltherm Duct Insulation all in one brochure, available in pdf format.

Kingspan Insulation supports all of its products with a comprehensive Technical Advisory Service for specifiers, stockists and contractors. The website will support this service with easily accessible company contact details and links to other relevant bodies.

Kingspan's Ducting Brand Manager Rachael Morris said:

“Innovation is a way of life at Kingspan and that applies to our customer service as much as to our products. Like our products, this new website has been designed to be elegant in its simplicity. It contains the best information available to help our customers to achieve their aims.”
